1. Naïve Bayes classifier on cancer dataset. Pretty accurate overall, especially for a model only based on probabilities.

	precision	recall	f1-score	support
0.0	0.87	1.00	0.93	40
1.0	1.00	0.92	0.96	74
accuracy			0.95	114
macro avg	0.93	0.96	0.94	114
weighted avg	0.95	0.95	0.95	114

2. Logistic regression with PCA (k=1:30) on cancer dataset. The optimal k is 9 in this situation.

Results with k=9:

	precision	recall	f1-score	support
0	1.00	0.95	0.97	40
1	0.97	1.00	0.99	74
accuracy			0.98	114
macro avg	0.99	0.97	0.98	114
weighted avg	0.98	0.98	0.98	114

3. Naïve Bayes with PCA (k=1:30) on cancer dataset. The optimal k is 7 in this situation.

Results with k=7:

	precision	recall	f1-score	support
0	0.95	0.90	0.92	40
1	0.95	0.97	0.96	74
accuracy			0.95	114
macro avg	0.95	0.94	0.94	114
weighted avg	0.95	0.95	0.95	114
